Editorial

Guest Editors' Foreword

This special issue of the Journal of Logic and Algebraic Programming (JLAP) is devoted to revised full versions of selected papers presented at the 20th Nordic Workshop on Programming Theory, NWPT 2008, held in Tallinn, Estonia, 19–21 November 2008.

The NWPT series of workshops is a forum for Nordic and Baltic programming theorists (but also interested researchers from elsewhere) to present their work at a regional level. NWPT 2008 marked the 20th anniversary of the series. Since 1997, each workshop in the series has been followed by a special issue of a journal. The special issues of NWPT 2006 and NWPT 2007 were published in JLAP (vol. 77, nos. 1–2, 2008 and vol. 78, no. 7, 2009).

NWPT 2008 attracted 50 participants from 15 countries. The scientific programme of the workshop consisted of four invited talks (by Dave Clarke, Vincent Danos, Martin Fränzle and Margus Veanes) and 30 contributed papers.

This special issue comprises 10 articles, representing two invited talks and (the papers by Fränzle et al. and by Veanes and Jacky) and eight contributed papers of this programme. The selection reflects the diversity of the topics that were addressed at the workshop.

We are grateful to the authors and referees of this special issue for their hard work on the articles.

NWPT 2008 was supported by the Estonian Centre of Excellence in Computer Science, EXCS, funded by the European Regional Development Fund. We are indebted to our colleagues at the Institute of Cybernetics in Tallinn for the effort they put into the local organization of the event.
